MyFi ESS | Leave application workflow

APPROVED WORKFLOW · Fictional-data MVP; company HR policies still require confirmation

1 EMPLOYEE FILES	2 SUPERVISOR	3 HR FINALIZES	4 TEAM UPDATED

The usual path

• Employee: Selects leave/dates, enters a reason, uploads any required PDF/image before Submit. The system calculates working days, checks eligibility and reserves paid credits.

• Supervisor: Approves (remark optional) or rejects (remark required). The supervisor’s own request goes to a higher approver; self-approval is prohibited.

• HR: Independently checks policy, credits and documents, then finalizes, rejects or returns for correction. Final approval converts reserved credits to used credits.

• After approval: Employee notified; team calendar and announcements show only the employee’s name and absence dates—not leave type, reason or documents.

If the request does not follow the usual path

Supervisor or HR rejects	Final for that application. A reason is required; credits released; history kept. Employee may start a new request.
HR returns for correction	Credits stay reserved. HR gives instructions and deadline (extendable). Attachment/remarks change → HR; date, duration or leave type change → supervisor again, then HR. Expired deadline releases credits.
Employee withdraws BEFORE HR final approval	No review required while pending/returned. Withdrawal reason optional; credits released and history kept.
Employee requests cancellation AFTER approval	HR reviews. If approved: restore eligible credits, update calendar and team notice. If denied: leave stays approved; HR provides remark.
Abandoned document upload	Private temporary file is automatically cleaned up after a configured time.

Shared rules: Reviewer remarks always visible; optional for approvals, mandatory for rejection/return. Private reasons, remarks and attachments are visible only to employee/authorized reviewers. Sample leave entitlements are provisional.
